Bb CORNET

You'll know in the time it takes to run the scale ... there's something quite different about the Martin cornet. Each tone is perfectly defined and clear, with true cornet quality throughout all registers. Then as you play a tied phrase, you'll find that each note is clean-cut, quite unlike anything you've ever experienced. This is due to the incredibly fast, perfectly balanced action of Martin *Micromagic* valves. And when you start playing skip intervals up and down the scale ... the ones that have always had you a little worried, you'll discover an amazing flexibility! It's another reason dozens of America's foremost cornetists play Martin ... the cornet specially designed by a committee of outstanding players in collaboration with Martin craftsmen. For cornet performance at its best — it's the *Committee Model* Martin!

MODELS AND FINISHES: De Luxe Committee Model (illustrated) — Finished in lacquered brass with solid nickel silver trim, and in burnished gold. Committee Model — Available in lacquered brass, silver with gold bell, or burnished gold. Both models available in either #2 (medium) bore or #3 (large) bore.

Only cornet with Micromagic valves

Micromagic Process

Only cornet with *Micromagic* valves! Lightning valve action is yours right from the start with a Martin Cornet ... it needs no breaking in! Graphs above show how *Micromagic* process, exclusive with Martin, gets valve surfaces 9 times smoother than handlapping ... the old method used by most other manufacturers.
